Assignment Project Exam Help

Applications of number theory include:

- Cryptography/Security (primes, divisibility)
- Large integer calculations (modular arithmetic)
- Date and time calculations (modular arithmetic)
- Solving optimization problems (integer linear programming)
- Interesting examples for future topics in this course

Notation for numbers

Definition

- Natural numbers $\mathbb{N} = \{0, 1, 2, \dots\}$
- Integers $\mathbb{Z} = \{\dots, -1, 0, 1, 2, \dots\}$
- Positive integers $\mathbb{N}_{>0} = \mathbb{Z}_{>0} = \{1, 2, \dots\}$
- Rational numbers (fractions) $\mathbb{Q} = \left\{ \frac{m}{n} : m, n \in \mathbb{Z}, n \neq 0 \right\}$
- Real numbers (decimal or binary expansions) \mathbb{R}
 $r = a_1 a_2 \dots a_k . b_1 b_2 \dots$

In \mathbb{N} and \mathbb{Z} different symbols denote different numbers.

In \mathbb{Q} and \mathbb{R} the standard representation is not necessarily unique.

Assignment Project Exam Help

NB

Proper ways to *introduce reals* include Dedekind cuts and Cauchy sequences, neither of which will be discussed here. Natural numbers etc. are either axiomatised or constructed from sets ($0 \stackrel{\text{def}}{=} \{\}, n+1 \stackrel{\text{def}}{=} n \cup \{n\}$)

WeChat: cstutorcs

Floor and ceiling

Definition

$\lfloor \cdot \rfloor : \mathbb{R} \rightarrow \mathbb{Z}$ — floor of x , the greatest integer $\leq x$
 $\lceil \cdot \rceil : \mathbb{R} \rightarrow \mathbb{Z}$ — ceiling of x , the least integer $\geq x$

Example

$\lfloor \pi \rfloor = 3 = \lceil e \rceil$, $\pi, e \in \mathbb{R}$; $\lfloor \pi \rfloor, \lceil e \rceil \in \mathbb{Z}$

Simple properties

- $\lfloor -x \rfloor = -\lceil x \rceil$, hence $\lceil x \rceil = -\lfloor -x \rfloor$
- For all $t \in \mathbb{Z}$:
 - $\lfloor x + t \rfloor = \lfloor x \rfloor + t$ and
 - $\lceil x + t \rceil = \lceil x \rceil + t$

Assignment Project Exam Help

Fact:

Let $k, m, n \in \mathbb{Z}$ such that $k > 0$ and $m \geq n$. The number of multiples of k between n and m (inclusive) is

$$\left\lfloor \frac{m}{k} \right\rfloor - \left\lfloor \frac{n-1}{k} \right\rfloor$$

WeChat: cstutorcs

Absolute value

Assignment Project Exam Help

Definition

$$|x| = \begin{cases} x & , \text{ if } x \geq 0 \\ -x & , \text{ if } x < 0 \end{cases}$$

<https://tutorcs.com>

Example

$$|3| = |-3| = 3 \quad 3, -3 \in \mathbb{Z}, |3|, |-3| \in \mathbb{N}$$

Exercises

RW: 1.1.4

(b) $2 \lfloor 0.6 \rfloor - \lfloor 1.2 \rfloor =$

$2 \lfloor 0.6 \rfloor - \lfloor 1.2 \rfloor =$

(d) $\lceil \sqrt{3} \rceil - \lfloor \sqrt{3} \rfloor =$

RW: 1.1.19

(a) Give x, y such that $\lfloor x \rfloor + \lfloor y \rfloor < \lfloor x + y \rfloor$:

WeChat: cstutorcs

20T2: Q1 (a)

(i) True or false for all $x \in \mathbb{R}$:

$\lceil |x| \rceil = \lceil x \rceil$

Assignment Project Exam Help

<https://tutorcs.com>

Exercises

RW: 1.1.4

(b) $2 \lfloor 0.6 \rfloor - \lfloor 1.2 \rfloor = -$

$$2 \lfloor 0.6 \rfloor - \lfloor 1.2 \rfloor = 0$$

(d) $\lceil \sqrt{3} \rceil - \lfloor \sqrt{3} \rfloor = 1$

RW: 1.1.19

(a) Give x, y such that $\lfloor x \rfloor + \lfloor y \rfloor < \lfloor x + y \rfloor$:

$$x = y = 0.9$$

20T2: Q1 (a)

(i) True or false for all $x \in \mathbb{R}$:

$$\lceil |x| \rceil = |\lceil x \rceil| \text{ — false (e.g. } x = -1.5)$$

Divisibility

Definition

For $m, n \in \mathbb{Z}$, we say m divides n if $n = k \cdot m$ for some $k \in \mathbb{Z}$.

We denote this by $m|n$

Also stated as: ' n is divisible by m ', ' m is a divisor of n ', ' n is a multiple of m '

$m \nmid n$ — negation of $m|n$

NB

Notion of divisibility applies to all integers — positive, negative and zero.

Exercises

True or False for all $n \in \mathbb{Z}$:

- $1|n$
- $-1|n$
- $0|n$
- $n|0$

RW: 1.2.2

- (a) $n|1$
- (b) $n|n$
- (c) $n|n^2$

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

Exercises

True or False for all $n \in \mathbb{Z}$:

- $1|n$ — true
- $-1|n$ — true
- $0|n$ — false (only when $n=0$)
- $n|0$ — true

RW: 1.2.2

- (a) $n|1$ — false (only when $n=\pm 1$)
- (b) $n|n$ — true
- (c) $n|n^2$ — true

gcd and lcm

Definition

Let $m, n \in \mathbb{Z}$.

- The **greatest common divisor** of m and n , $\gcd(m, n)$, is the largest positive d such that $d|m$ and $d|n$.
- The **least common multiple** of m and n , $\text{lcm}(m, n)$, is the smallest positive k such that $m|k$ and $n|k$.
- Exception: $\gcd(0, 0) = \text{lcm}(0, n) = \text{lcm}(m, 0) = 0$.

Example

WeChat: cstutorcs

$$\gcd(-4, 6) = \gcd(4, -6) = \gcd(-4, -6) = \gcd(4, 6) = 2$$

$$\text{lcm}(-5, -5) = \dots = 5$$

Assignment Project Exam Help

NB

gcd(m, n) and lcm(m, n) are always taken as non-negative even if m or n is negative.

<https://tutorcs.com>

Fact

$$\gcd(m, n) \cdot \text{lcm}(m, n) = |m| \cdot |n|$$

WeChat: cstutorcs

Primes and relatively prime

Assignment Project Exam Help

Definition

- A number $n > 1$ is **prime** if it is only divisible by ± 1 and $\pm n$.
- m and n are **relatively prime** if $\gcd(m, n) = 1$

<https://tutorcs.com>

Examples

- 2, 3, 5, 7, 11, 13, 17, 19 are all the primes less than 20.
- 4 and 9 are relatively prime; 9 and 14 are relatively prime.

WeChat: cstutorcs

Exercises

RW: 1.2.7(b) $\gcd(0, n) = ?$

RW: 1.2.12 Can two even integers be relatively prime?

RW: 1.2.9 Let m, n be positive integers.

(a) What can you say about m and n if $\text{lcm}(m, n) = m \cdot n$?

(b) What if $\text{lcm}(m, n) = n$?

Exercises

RW: 1.2.7(b) $\gcd(0, n) \stackrel{?}{=} |n|$

RW: 1.2.12 Can two even integers be relatively prime? No. (why?)

RW: 1.2.9 Let m, n be positive integers.

(a) What can you say about m and n if $\text{lcm}(m, n) = m \cdot n$?

They must be relatively prime since always $\text{lcm}(m, n) = \frac{mn}{\gcd(m, n)}$

(b) What if $\text{lcm}(m, n) = n$?

m must be a divisor of n

Euclid's gcd Algorithm

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n + m) & \text{if } n < m \end{cases}$$

Assignment Project Exam Help

WeChat: cstutorcs

Euclid's gcd Algorithm

$$\text{gcd}(m, n) = \begin{cases} m & \text{if } m = n \\ \text{gcd}(m - n, n) & \text{if } m > n \\ \text{gcd}(m, n + m) & \text{if } m < n \end{cases}$$

Assignment Project Exam Help

Example

<https://tutorcs.com>

$$\begin{aligned} \text{gcd}(45, 27) &= \text{gcd}(18, 27) \\ &= \text{gcd}(18, 9) \\ &= \text{gcd}(9, 9) \\ &= 9 \end{aligned}$$

WeChat: cstutorcs

Euclid's gcd Algorithm

$$\text{gcd}(m, n) = \begin{cases} m & \text{if } m = n \\ \text{gcd}(m - n, n) & \text{if } m > n \\ \text{gcd}(m, n + m) & \text{if } m < n \end{cases}$$

Assignment Project Exam Help

Example

<https://tutorcs.com>

WeChat: cstutorcs

$$\begin{aligned} \text{gcd}(108, 8) &= \text{gcd}(100, 8) \\ &= \text{gcd}(92, 8) \\ &= \text{gcd}(8, 4) \\ &= \text{gcd}(4, 4) \\ &= 4 \end{aligned}$$

Euclid's gcd Algorithm

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n + m) & \text{if } n > m \end{cases}$$

Assignment Project Exam Help

Fact

<https://tutorcs.com>

For $m > 0, n > 0$ the algorithm always terminates.

Fact

WeChat: cstutorcs

For $m, n \in \mathbb{Z}$, if $m > n$ then $\gcd(m, n) = \gcd(m - kn, n)$

Euclid's gcd Algorithm

Fact

For $m, n \in \mathbb{Z}$, if $m > n$ then $\gcd(m, n) = \gcd(m - n, n)$

Proof:

We first show that for all $d \in \mathbb{Z}$, $(d|m \text{ and } d|n)$ if, and only if, $(d|m - n \text{ and } d|n)$:

" \Rightarrow ": if $d|m$ and $d|n$ then $m = a \cdot d$ and $n = b \cdot d$ for some $a, b \in \mathbb{Z}$,
so $m - n = (a - b) \cdot d$,
hence $d|m - n$

" \Leftarrow ": if $d|m - n$ and $d|n$ then $m - n = a \cdot d$ and $n = b \cdot d$, for some $a, b \in \mathbb{Z}$,
so $m = (m - n) + n = (a + b) \cdot d$,
hence $d|m$

Therefore, any common divisor of m and n is a common divisor of $m - n$ and n , and vice versa.

Therefore, the greatest common divisor of m and n is the greatest common divisor of $m - n$ and n . □

Euclid's division lemma

Assignment Project Exam Help

Fact:

For $m \in \mathbb{Z}$, $n \in \mathbb{Z}_{>0}$ there exists $q, r \in \mathbb{Z}$ with $0 \leq r < n$ such that

$$m = q \cdot n + r$$

<https://tutorcs.com>

Observe:

- $q = \lfloor \frac{m}{n} \rfloor$

- $r = m - q \cdot n$

WeChat: cstutorcs

Definition

Let $m, p \in \mathbb{Z}$, $n \in \mathbb{Z}$, $n \neq 0$.

- $m \text{ div } n = \lfloor \frac{m}{n} \rfloor$
- $m \% n = m - (m \text{ div } n) \cdot n$
- $m \equiv_{(n)} p$ if $n \mid (m - p)$

Important!

$m \equiv_{(n)} p$ is **not standard**. More commonly written as

$$m = p \pmod{n}$$

Assignment Project Exam Help

Fact

- $0 \leq (m \% n) < n$.
- $m \equiv_{(n)} p$ if, and only if, $(m \% n) = (p \% n)$.
- $m \equiv_{(n)} (m \% n)$.
- If $m \equiv_{(n)} m'$ and $p \equiv_{(n)} p'$ then:
 - $m + p \equiv_{(n)} m' + p'$ and
 - $m \cdot p \equiv_{(n)} m' \cdot p'$.

<https://tutorcs.com>
WeChat: cstutorcs

Exercises

- $42 \text{ div } 9 = ?$

- $42 \% 9 = ?$

- $(-42) \text{ div } 9 = ?$

- $(-42) \% 9 = ?$

- True or False:

$$(a + b) \% n = (a \% n) + (b \% n)?$$

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

Exercises

- $42 \div 9 \stackrel{?}{=} 4$

- $42 \% 9 \stackrel{?}{=} 6$

- $(-42) \div 9 \stackrel{?}{=} -5$

- $(-42) \% 9 \stackrel{?}{=} 3$

- True or False:
 $(a + b) \% n = (a \% n) + (b \% n)?$

False (take $a = b = 1, n = 2$)
